14-A7

The Great walks with the Small without fear.

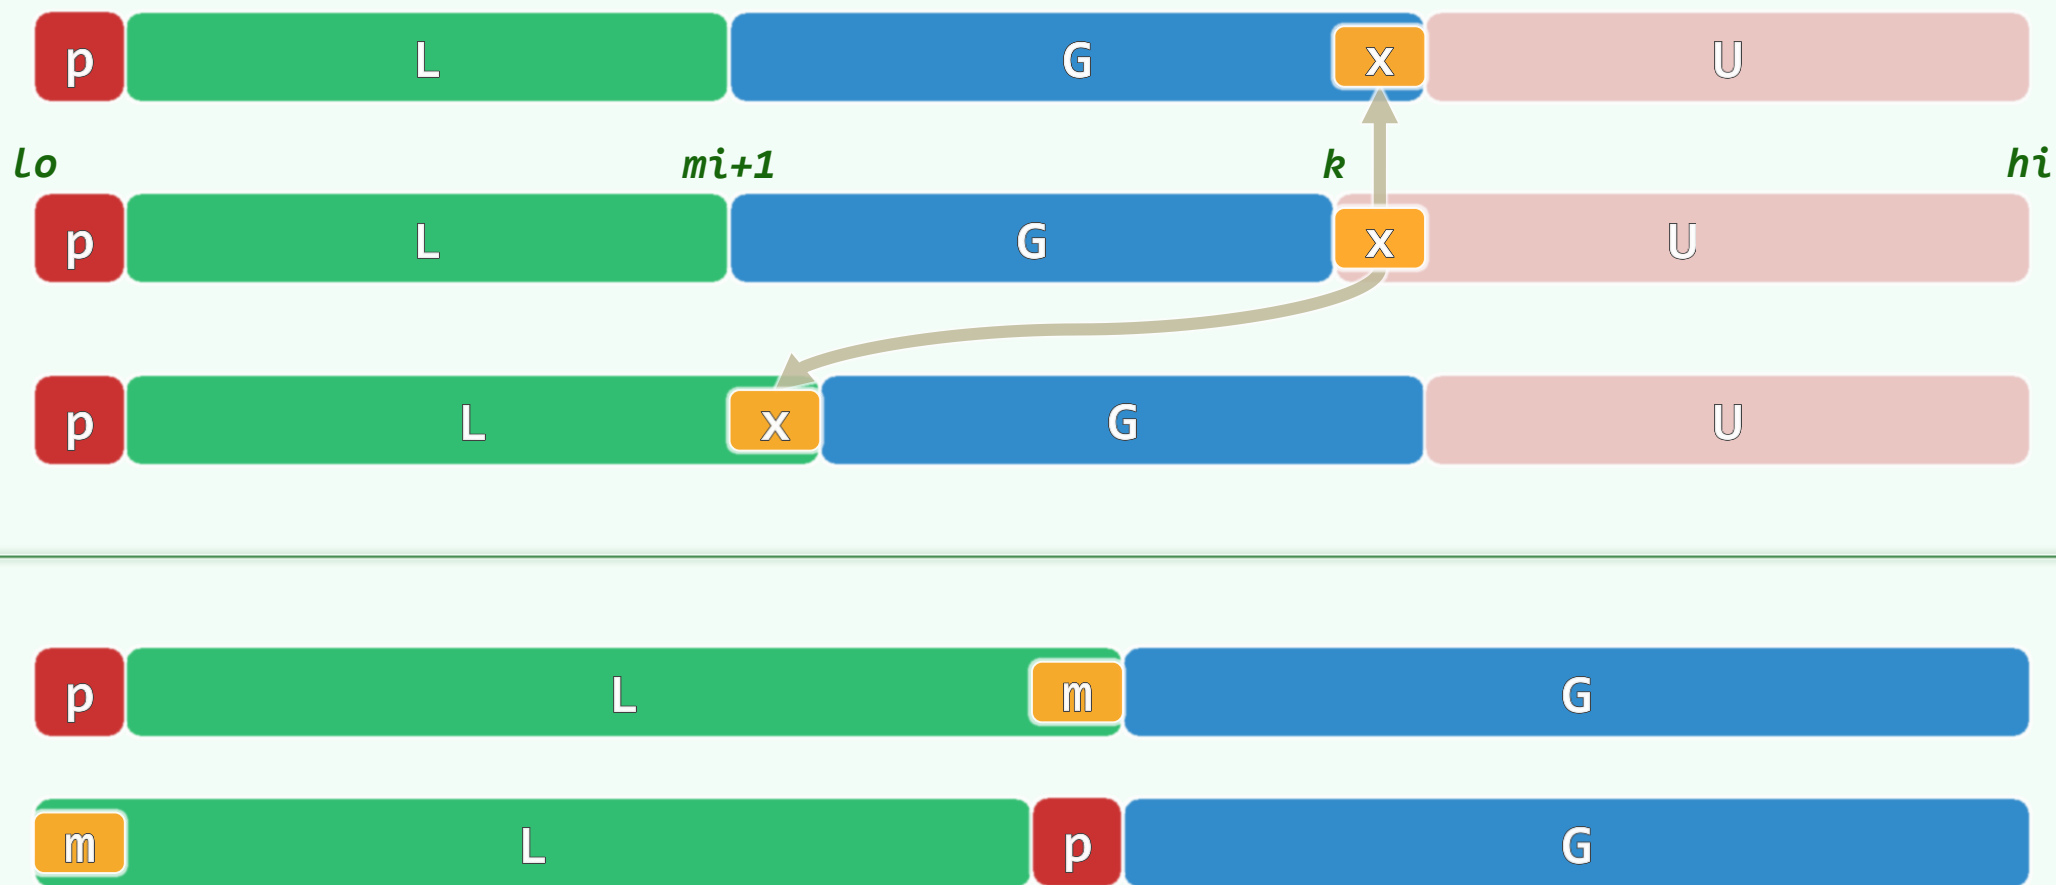

The Middle keeps aloof.

邓俊辉

deng@tsinghua.edu.cn

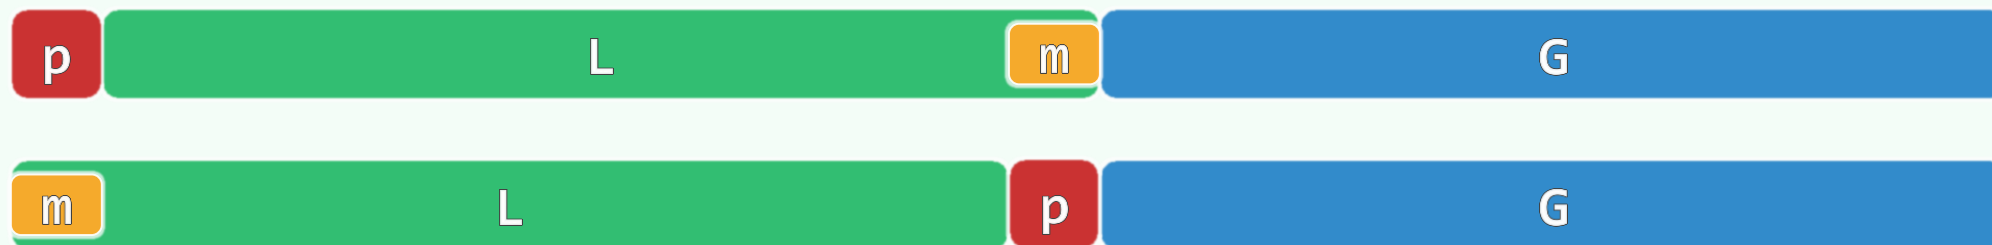

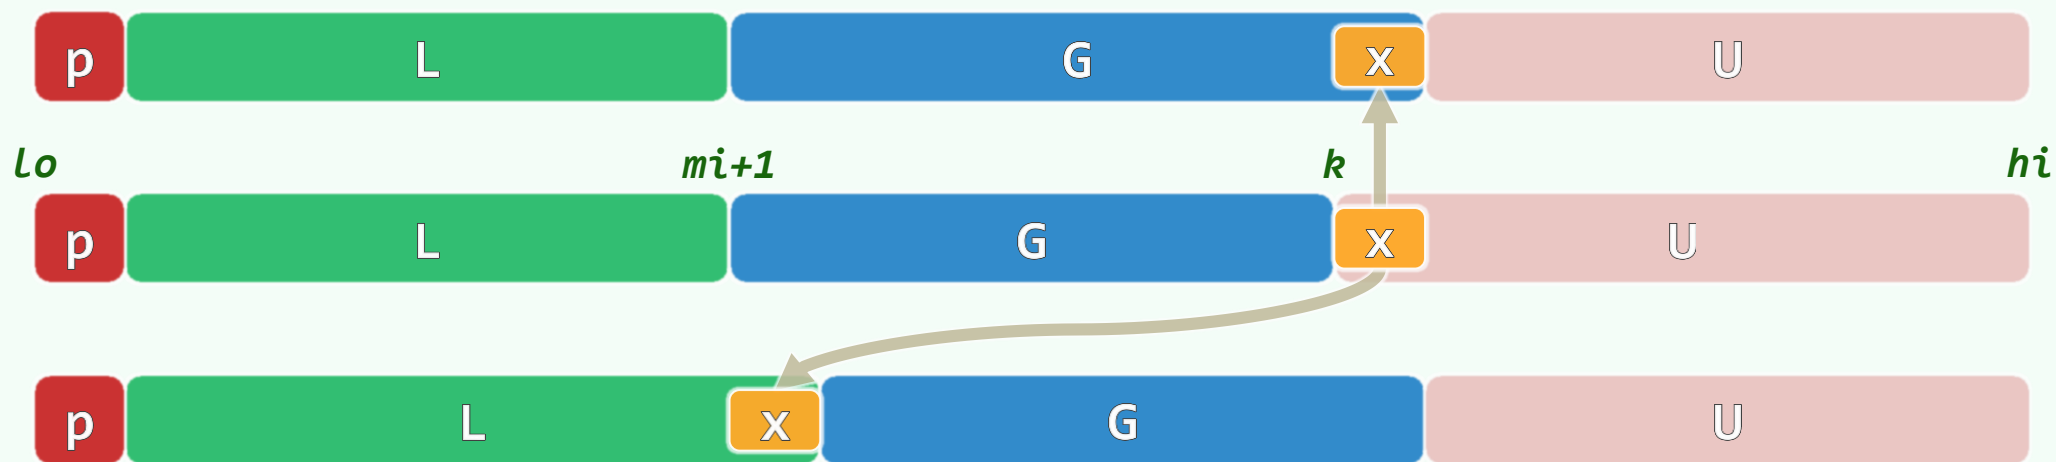

**不变性:**  $S = [lo, hi) = [lo] + (lo, mi] + (mi, k) + [k, hi) = pivot + L + G + U$

$$L < pivot \leq G$$

单调性:  $[k]$  不小于轴点 ? 直接  $G$  拓展 :  $G$  滚动后移,  $L$  拓展

$\text{pivot} \leq S[k] ? k++ : \text{swap}(S[mi], S[k])$

## 快速划分：LQU版

```
template <typename T> Rank Vector<T>::partition( Rank lo, Rank hi ) { //[lo, hi)

    swap( _elem[ lo ], _elem[ lo + rand() % ( hi - lo ) ] ); //随机轴点

    T pivot = _elem[ lo ]; Rank mi = lo;

    for ( Rank k = lo + 1; k < hi; k++ ) //自左向右考查每个[k]
        if ( _elem[ k ] < pivot ) //若[k]小于轴点, 则将其
            swap( _elem[ ++mi ], _elem[ k ] ); //与[mi]交换, L向右扩展

    swap( _elem[ lo ], _elem[ mi ] ); //候选轴点归位 (从而名副其实)

    return mi; //[lo,mi) < [mi] <= (mi,hi)
}
```
